

Game Design Document

sep/10/2026

Ben Xiao

Instructions

Complete the following Game Design Document by replacing everything that is grayed out with your own design.

Make sure that your writing is neither gray or italicized.

1. Game Concept and Theme

Title	Genre	Theme
<i>I am a ball!</i>	<i>A human pretends to be a ball and rolls around the city to find jobs, earn money and buy a better home.</i>	<i>Low poly, semi-realistic</i>
Target Audience	Modeled After	
<i>13+</i>	<i>InZOI, GTA series, city-sim</i>	

2. Core Mechanics

Basic Gameplay and Mechanics	<i>Player uses WASD to roll around, Space to jump and E to interact</i> <i>Mouse moves the camera; left click shoots after buying a pistol</i> <i>Money, hunger/thirst and 5 jobs; police chase you if you cause trouble</i>
Player Controls	<i>Movement keys (WASD), Space to jump, M = big map, H = help</i> <i>Interaction with NPCs, shops and job boards (E)</i> <i>Managing money from jobs, spending it on food, homes and the black market</i> <i>Buy foods or drinks to fill the hunger or thirst bar</i>
User Interface	<i>Amount of money, wanted stars and a minimap</i> <i>Hunger and thirst bars, a tutorial and a help screen (H)</i> <i>Press E prompts, job goals and a big map (M) that shows what to do next</i>

3. Terrain and Environment

Level Design	<i>I use Blender for my own models (roads, road lights, tunnels, sewer, the player) and low poly Kenney models for buildings, cars and NPCs. The player is not a simple ball but a low poly human that tries to be a ball.</i>
	<i>Inside the city: apartments, a food court, a delivery depot, a police station, a hospital, downtown towers and suburbs with trees, benches, traffic lights, cars and NPCs. Outside: a pine forest, a lake park, a soccer field and mountains. The player starts in an apartment and earns money to buy a better home (\$300 house, then the \$800 Dream Villa).</i>

--	--

4. Visual Style & Sound	
Visual	Low poly and semi-realistic
VFX	Light from windows, glowing street lights, sun and moonlight (day and night cycle), dust everywhere
Sounds and Effects	Car engines, horns and sirens, city noise, gunshots, UI sounds and music that changes when the police chase you
Other Features	A hidden black market under the city: climb down the sewer entrance to buy a pistol or a disguise (bad stuff)

5. Concept Art	
Instructions: Create 4-6 reference images that show the visual style and assets you plan to use in your game. Include images for: - Collectibles: What will your collectible objects look like? Example: - Golden coins, glowing gems, floating orbs - Traps/Hazards: What will your dangerous objects look like? Example: - Spikes, fire pits, electric barriers - Player/Ball: What will the player-controlled object look like? Example: - Metal sphere, character in a hamster ball, glowing orb	
Scene	It will have low poly shapes while having some realistic mechanics; UI is cartoonish, mostly low poly buildings and NPCs, and NPCs can be pushed and knocked over in a realistic way

Key Objects	<i>Instructions: Create reference images that show the visual style and assets you plan to use in your game. Include images for:</i> 1. Collectibles: money from 5 jobs and cash lying around the city 2. Traps/Hazards: cars can send you to the hospital; hurting NPCs brings the police 3. Player/Ball: a human like - ball	

6. Milestone Plan		
Milestone	Description	Due
Pre-Production	- Completion of the GDD and template	mm/dd
Prototype	- Functional game, no art or polish	mm/dd
Pre-Alpha (MVP)	- Complete Untested Game	mm/dd
Alpha/Final	- Allow 1 day for testing	mm/dd
Backlog		mm/dd
